

Change Record Style Guide

A guide to help change request owners write effective and consistent change record titles and descriptions

Key Elements:

- **Clarity:** Use simple and direct language. Avoid jargon, acronyms, and technical terms unfamiliar to a business partner audience.
- **Conciseness:** Use as few words as possible to convey your message. Avoid unnecessary details, filler words, and redundant expressions.
- **Standardization:** Use formatting conventions when writing change record titles and descriptions and apply consistent terminology, formatting, and punctuation.

Change Record Titles:

Write a brief and informative title that summarizes the main goal or outcome of your change with the following format:

[Location (as needed)] + [action] + [object] + [modifier] + [scope]

Examples:

1. **ANCKK Upgrade network router to v10.2**
2. **Deploy Flight Attendant API v2.7 on DNA servers**

Change Record Descriptions:

Write a detailed and comprehensive description that can inform business partners of the work and covers necessary aspects of your change: what, why, who, when, where, and how.

Examples:

1. Primary ANC station network router being upgraded from v10.0 to v10.2 to access new features. No outage is required.
2. Automated package deployment of Flight Attendant API v2.7 will run on IGQ and SE4 DNA servers. Brief interruption post install while services restart.

Common Terms and Language:

Install	Add new software or hardware	Deploy	<i>Automated</i> software delivery
Uninstall	Remove software or hardware	DR Exercise	Service move test between primary secondary
Upgrade	New version of something existing	Decommission	Removing something from the enterprise
Patch	Vendor code maintenance update	Restart	Application services being stopped and started again
Release	<i>Automated pipeline</i> code delivery	Reboot	Infrastructure components being shut down and started again
